  Comment:

- \* a. The construction of railroad cars was **not started in the Prague-Smichov Tatra Plant** before 1946. The plant also manufactures trackless trolleys.
- \*\* b. The Koprivnice Tatra Plant mainly produces railroad car undercarriages for assembly in the Studenka (O 51/G 13) Railroad Car Plant.
- c. Other Czechoslovakian railroad car plants are in Kolin (O 51/X 38) and in Ceska Lipa (Bohmisch Leipa) (O 51/Y 75). The Slovakian production share is negligible (about 1 percent).
- d. The railroad car plants in Studenka, Prague-Smichov, Kolin and Bohmisch Leipa were subsidiaries of the Tatra-Koprivnice National Corporation until late 1949. They became independent industrial enterprises on 1 January 1950.
- e. Postwar freight car production increased considerably in Czechoslovakia and reached a maximum in 1947 of ten times the prewar mark.
- f. Czechoslovakia produced 15,345 freight cars in 1947 and 11,000 in 1948. Freight car production should decline to 7,700 units under the Five Year Plan, but it again increased considerably in 1949. A production of 8,003 units was reached in the first six months of 1949. This even exceeded the maximum production of 8,379 units attained in the first six months of 1947. The maximum monthly production (1,835 units) was reached in March 1949. According to
